

CLAIMS

1. A closure element for containers of cosmetic products and the like, characterized in
5 that said closure element comprises a closure element body defining a plug portion which can be applied in a closure relationship to the mouth of a container and being provided with a central recessed portion providing an auxiliary container, a closure
10 cover for said recessed portion being moreover provided.

2. A closure element, according to the preceding claim, characterized in that said body substantially defines a mantle portion, having an inner surface on which coupling means for coupling to the container mouth are provided.
15

3. A closure element, according to the preceding claims, characterized in that said coupling means for coupling to the mouth of said container, comprises a coupling thread.
20

4. A closure element, according to one or more of the preceding claims, characterized in that said recessed portion providing said auxiliary container is delimited, at a top thereof, by a rim, inward thickened, which can be engaged with a tooth element correspondingly provided on the closure cover.
25

5. A closure element, according to one or more of the preceding claims, characterized in that said closure cover is coupled to said body by a foot element operating as a hinge element.
30

6. A closure element, according to one or

more of the preceding claims, characterized in that said auxiliary container can be housed in said mouth of said container on which said closure element is arranged.

- 5 7. A closure element for cosmetic product containers and the like, according to one or more of the preceding claims, and substantially as broadly disclosed and illustrated and for the intended aim and objects.
